

Hot Pressed Sintered Segmented Diamond Saw Blade

This is a general purpose blade designed for extended operational life. It is suitable for cutting diverse materials like brick, block, concrete, masonry, and stone.

Product Overview

Professional Diamond Saw Blade

This hot-pressed sintered segmented diamond saw blade is engineered for efficient and precise cutting across a variety of hard materials, including concrete, stone, masonry, brick, and block. The segmented design facilitates improved cooling and debris removal, which significantly extends the blade's operational lifespan while maintaining high cutting speeds. Built with a robust sintered construction, this blade provides the durability and strength required for demanding professional applications.

Technical Specifications

Customization

Arbor size available on request

Manufacturing Process	Hot Pressed Sintered
Blade Type	Segmented
Compatible Materials	Concrete, Stone, Masonry, Brick, Block

Usage

Compatible Tools

- Angle Grinders
- Circular Saws
