

Hot Pressed Sintered Turbo Saw Blade with Protection Teeth

This hot-pressed sintered turbo blade is designed with protection teeth. The teeth protect the steel core from undercutting when cutting abrasive materials, ensuring high performance and a long service life.

Product Overview

High-Performance Sintered Turbo Blade

This hot-pressed sintered turbo saw blade is engineered for demanding cutting applications, featuring specialized protection teeth that safeguard the steel core against undercutting. Designed for efficiency and durability, it delivers consistent performance when cutting abrasive materials. Ideal for professional use with various electric tools, this blade ensures both a clean cut and an extended service life.

Technical Features

Manufacturing Process	Hot Pressed Sintered
Core Protection	Yes
Key Benefits	Undercut Protection, High Performance, Extended Service Life, Abrasive Material Compatible

Performance Metrics

Performance Highlights

100 % Durability Rating	1 High Undercut Resistance
