

Hot Pressing Machine

This hot pressing machine is designed for material consolidation and bonding. It features precise temperature control, programmable pressure application, and a robust hydraulic system.

Overview

High-Performance Hot Pressing Solution

The TJAW142 is a high-temperature hot pressing machine engineered for precise material consolidation and bonding. It features a robust hydraulic system and programmable pressure application, ensuring consistent performance for both research and industrial environments. Built with a stainless steel chamber, this unit combines durability with a user-friendly interface for seamless parameter monitoring.

Technical Specifications

Model Number	TJAW142
Chamber Material	Stainless Steel

Key Features

Control Capabilities

- Precise temperature control
- Programmable pressure application
- User-friendly interface

Safety Systems	Over-temperature protection, Emergency stop
----------------	---
