

Hot Rolled Steel Cut-to-Length Line

High-precision cut-to-length line processes hot-rolled steel coils into specified sheet lengths. The automated system includes uncoiling, leveling, shearing, and stacking units for efficient cutting operations.

Overview

High-Efficiency Processing Line

This Hot Rolled Steel Cut-to-Length Line is designed for processing hot-rolled steel coils into sheets of specific lengths with high precision. The system integrates advanced leveling, shearing, and stacking units to ensure efficient operations and minimal material waste. With its user-friendly interface and robust automated controls, it is an ideal solution for steel service centers and manufacturing facilities requiring high-volume production.

Key Features

Performance Highlights

- High quality on leveling
- High cutting accuracy
- High precision cut-to-length control
- Perfect stacking capability

Usability & Maintenance

User-friendly interface, Easy maintenance, Simple operation

Technical Specifications

System Components

Component	Function
Uncoiler	Material feeding
Leveler	Surface flattening
Shear	Precision cutting
Stacking Unit	Output organization
