

Hot Rolled Steel Wire Rod

Hot rolled steel wire rod is produced from continuous casting steel. It is commonly used in construction, manufacturing, and various infrastructure projects.

Product Overview

Hot Rolled Steel Wire Rod

Hot rolled steel wire rod is a fundamental industrial material used extensively in construction, automotive, and manufacturing sectors. Produced through a hot rolling process, this product offers excellent ductility and tensile strength, making it ideal for further processing such as wire drawing or cold forming. Its versatile nature ensures it meets rigorous standards for various industrial applications.

Product Details

Material Type

Steel • Hot Rolled

Product Name

Hot Rolled Steel Wire Rod
