

Hot Water Recirculation Pump

This high-efficiency pump is designed for domestic hot water recirculation systems. It features robust construction, ensuring consistent water flow and optimal temperature control for various heating applications.

Overview

High-Efficiency Boiler Circulation Pump

This high-efficiency boiler circulation pump is specifically engineered for domestic hot water recirculation systems. Its robust construction ensures long-lasting performance and reliable operation across various heating applications. Designed for consistent water flow and optimal temperature control, this unit provides energy-efficient operation to help reduce overall costs.

Technical Features

Key Performance Metrics

1 High

Operational Efficiency

1 Low/Quiet

Noise Level

Design Advantages

- Robust construction for durability
- Advanced motor technology for quiet operation
- Easy installation and maintenance
- Energy-efficient design

Suitable Applications

Domestic Hot Water, Heating Systems, Recirculation

Compliance

Standards & Safety

Industry Standard Compliant • Safety Rated
