

Household Micro Nutrient Mineral Collector

This micro nutrient mineral collector is a water filtration system designed for household use. It utilizes a dual-stage filtration process within stainless steel canisters to remove impurities while retaining beneficial minerals.

Overview

Household Micro Nutrient Mineral Collector

The 04H model is a specialized water filtration system engineered for residential environments. Utilizing a robust dual-stage filtration process, it is designed to effectively remove impurities from household water supplies while carefully retaining beneficial minerals. Housed in durable stainless steel canisters, this wall-mounted unit ensures both longevity and ease of integration into existing plumbing systems.

Technical Specifications

Primary Application

Household • Drinking Water • Water Filtration

Included Components

- Dual-stage filtration canisters
- Plumbing connection kit

Model Number	04H
Filtration Stages	2
Housing Material	Stainless Steel
Mounting	Wall-mounted
