

Household Reverse Osmosis Water Filter

This water purification machine utilizes a multi-stage filtration system. Measuring 382x189x468mm, it is designed for household use.

Overview

Professional Household Filtration

This high-efficiency water purification system provides a multi-stage filtration process designed to deliver clean, safe, and healthy drinking water for household use. By integrating pre-filtration, activated carbon, and reverse osmosis membrane technology, it effectively removes sediments, chlorine, organic contaminants, and dissolved solids. The system features an intuitive digital interface to monitor real-time water quality and filter health.

Technical Specifications

Monitoring Features

- Digital water quality display
- Filter status indicator

Filtration Technology

Pre-filtration, Activated Carbon, Reverse Osmosis Membrane

Installation and Design

Mounting Options

Under-sink • Wall-mounted

Design

Compact space-saving design
