

Household Reverse Osmosis Water Purification System

This reverse osmosis (RO) system purifies water for household use. It removes impurities through multiple filtration stages, providing clean and safe drinking water.

Product Overview

Advanced Household Filtration

This household reverse osmosis water purification system is engineered to provide cleaner and safer drinking water. By utilizing a 5-stage filtration process, it effectively targets bacteria, viruses, heavy metals, and organophosphorus compounds. The design prioritizes user convenience through easy installation, efficient low-power operation, and complete elimination of secondary pollution.

Model Identifier

RO-100

Technical Specifications

Filtration Stages

5 stages

Targeted Contaminants

Bacteria, Viruses, Heavy Metals, Organophosphorus

Performance & Efficiency

Operating Efficiency

1 Low

Water Usage Rate

1 Low

Power Consumption
