

Household Sewage Purifying Device

This sewage purifying device is designed for household use. It features connections for both water input and output and is suitable for use as a water dispenser.

Overview

Professional Household Filtration

This high-performance household sewage purifying device provides a reliable solution for residential water treatment. Engineered with a durable stainless steel structure, the unit ensures long-term stability and effective filtration. Designed for ease of integration into existing water systems, it serves as an essential component for maintaining high water quality standards.

Technical Specifications

Design Features

- Cylindrical stainless steel body
- Reinforced stable base
- Standardized inlet and outlet connections
- Corrosion-resistant exterior

Material Construction	Stainless Steel
Application	Residential, Water Filtration, Water Dispensing
Series	Water Filter Series
