

# Household Three-Stage Water Purification Machine

This water purification machine utilizes a three-stage filtration system. It is designed for household use and includes PP cotton, granular activated carbon (GAC), and CTO filters.

## Product Overview

### Clean Water Solution

This three-stage household water purification machine is engineered to provide safe and clean drinking water. Utilizing a combination of high-quality filter stages, it effectively removes impurities from your water supply. The system is designed for residential convenience, ensuring reliable performance for daily household water needs.

## Technical Specifications

### Filtration Stages

- PP Cotton
- Granular Activated Carbon (GAC)
- CTO Filter

Model Identifier	RO-185G
Key Features	Three-Stage Filtration, Household Use, Impurities Removal
