

Household Water Filtration and Softening System

This combined filtration and softening machine is designed for household use. It integrates water purification and softening functionalities into a single unit.

ADDITIONAL IMAGES

Product Overview

Integrated Water Treatment Solution

This household water filtration and softening system combines purification and softening functionalities into a single, compact unit. By utilizing parallel processing, it simultaneously supplies filtered water for drinking and softened water for household use. Designed for efficiency, the system features automated maintenance alerts and precise salt management to ensure consistent water quality.

Filtration Technology

Filter Element

Disposable • Activated Carbon

Filtration Method

Double compressed activated carbon filter

Softening Features

Softening Process

Proportional brine draw and refill with soft water

Maintenance Alerts

Resin Maintenance Alarm, Salt Shortage Indicator

System Operation

Operational Mode

Parallel supply of filtered and softened water
