

Household Water Purifier

This water purifier is a household appliance that dispenses purified water. It uses a multi-stage filtration system to remove impurities and contaminants, providing clean and safe drinking water.

Product Overview

Advanced Household Water Purification

This household water purifier utilizes advanced micro-electronic technology to monitor filter lifespan and water quality via an integrated LCD screen. By incorporating high-performance membrane technology, it ensures healthier water output while maintaining a steady flow rate. The clever design effectively balances filtration precision with flow resistance, providing a reliable solution for clean drinking water.

Technology & Features

Interface & Monitoring

- LCD display screen
- Real-time water quality monitoring
- Filter lifespan tracking

Design Advantages

- High filtration precision
- Optimized flow resistance
- Adequate water output
- Integrated PP cotton filter

Filtration Technology

Micro-electronic Monitoring, Membrane Technology, Granular Activated Carbon, Powdered Activated Carbon
