

HSS Formwork Drill Bit

High-speed steel (HSS) formwork drill bits are designed for creating precise and clean holes in wood and formwork materials. The specialized flute design ensures efficient chip evacuation, reducing heat buildup and preventing clogging.

Product Overview

Professional HSS Formwork Drill Bit

These high-speed steel (HSS) formwork drill bits are engineered for creating precise, clean holes in wood and formwork materials. Featuring a specialized flute design, they ensure efficient chip evacuation to reduce heat buildup and prevent clogging during operation. Their extended length makes them ideal for drilling through thick formwork and reaching difficult-to-access areas, providing durability and wear resistance for demanding construction and carpentry tasks.

Technical Details

| | |
|---------------|-----------------------------------|
| Material | 4241 High-Speed Steel (HSS) |
| Applications | Construction, Carpentry, Formwork |
| Compatibility | Standard drill chucks |

Key Features

Performance Features

- Specialized flute design for efficient chip evacuation
- Extended length for thick materials
- High resistance to wear
- Reduced heat buildup
