

HVAC Condensate Removal Pump

This condensate pump is designed to remove condensate, which is water that accumulates in HVAC, refrigeration, steam, and other industrial systems. It features a plastic construction and is designed for efficient and reliable removal of condensate water in various applications.

Overview

Reliable Condensate Management

This HVAC Condensate Removal Pump is engineered for the efficient disposal of water accumulation in condensing clothes dryers and industrial systems. Designed with a focus on durability, the unit features waterproof, dustproof, and fireproof construction to ensure long-term reliability in demanding environments. Its versatile electrical compatibility and global certifications make it an ideal solution for international B2B sourcing requirements.

Technical Performance

Key Performance Metrics

50 Hz

Frequency Support

60 Hz

Frequency Support

Electrical Specifications

Operating Voltage

- 220V-240V
- 110V-127V
- Other single voltage options available

Design & Construction

Protection Ratings	Waterproof, Dustproof, Fireproof
Housing Material	Durable black plastic construction
Operation Mode	Automatic with built-in float switch

Applications

Recommended Use Cases

- Condensing type clothes dryers
- HVAC systems
- Refrigeration units
- Dehumidifiers
- Industrial steam systems

Compliance & Customization

Quality Certifications

TUV • VDE • UL • CCC

Customization

Different terminal designs available for specific customer requirements
