

HVAC Submersible Water Pump

This submersible water pump is designed for HVAC&R applications. It provides efficient water circulation and reliable performance in air conditioning, refrigeration, and heating systems.

Product Overview

Professional HVAC Submersible Pump

This submersible water pump is specifically engineered for HVAC&R applications, ensuring efficient water circulation across various climate control systems. It delivers reliable performance for air conditioning, refrigeration, and heating setups. The unit features a compact design, making it straightforward to install and maintain in professional environments.

Technical Specifications

Design Highlights

- Submersible configuration
- Compact form factor
- Easy installation
- Low maintenance requirements

Primary Applications

Air Conditioning, Refrigeration, Heating Systems, HVAC&R

Performance
