

HVAC Water Circulation Pump

This water pump is designed for HVAC&R systems. It provides reliable water circulation while minimizing vibration and noise.

Overview

Professional HVAC Water Circulation Pump

The QU-280 vibration-mask pump is a robust and efficient solution engineered specifically for high-performance HVAC&R systems. This unit provides reliable water circulation while effectively minimizing vibration and operational noise to ensure a quiet environment. Built for durability in demanding industrial settings, it offers long-lasting performance for various water pumping applications.

Key Features

Engineering Highlights

- Vibration masking technology for smooth operation
- Minimized noise output
- Durable heavy-duty construction
- Optimized for industrial water circulation

Primary Application

HVAC&R Systems, Water Circulation
