Overview

High-Efficiency HVAC Water Pump

The YMD-305D/S is a robust and efficient water circulation pump designed for the demanding requirements of HVAC and refrigeration systems. Featuring a durable corrosion-resistant brass body and reinforced components, this unit ensures long-term reliability in both commercial and industrial environments. Its integrated design, including a pressure release valve and stable mounting base, allows for simplified installation and secure, low-vibration operation.

Technical Specifications

Safety Features

- Pressure release valve
- Accumulator tank
- Vibration-reducing base mount

Materials

Corrosion-resistant brass, Reinforced plastic

Connection Type

Flange connection

Application

Suitable Environments

HVAC Systems • Refrigeration • Commercial • Industrial
