

HVAC&R Solenoid Valve with Brass Body

This solenoid valve is designed for HVAC&R applications, controlling the flow of fluids or gases. It features a robust brass body for durability and corrosion resistance.

Product Overview

Professional HVAC&R Flow Control

This electrically actuated solenoid valve is engineered specifically for demanding HVAC&R environments, providing reliable and precise control over fluid and gas flow. Constructed with a high-quality brass body, the unit offers exceptional durability and resistance to corrosion, ensuring a long operational life. It is an ideal solution for professionals seeking stable performance in integrated heating, ventilation, air conditioning, and refrigeration systems.

Technical Specifications

Body Material	Brass
Actuation Method	Electrically actuated

Application

Compatible Systems	Heating, Ventilation, Air Conditioning, Refrigeration
