

HVAC&R System Oil Pump

High-performance oil pump designed for HVAC&R systems, specifically for water pumping applications. This robust pump ensures efficient and reliable fluid transfer, contributing to optimal system performance and longevity.

Product Overview

HVAC&R System Oil Pump

This high-performance oil pump is engineered specifically for HVAC&R systems, providing reliable fluid transfer for industrial and commercial cooling and heating applications. Built with robust materials including an aluminum body and housing, it is designed for continuous duty operation. The unit features a versatile motor configuration and reliable protection standards to ensure optimal system longevity.

Construction & Materials

Pump Body Material	Aluminum
Motor Housing Material	Aluminum
Impeller Material	Plastic
Shaft with Rotor Material	45# Steel
Bearing Type	C&U or local bearing

Technical Specifications

Insulation Class	Class E
Protection Rating	IP44
Motor Phase	Single phase, Three phase

Operating Conditions

Duty Cycle	Continuous duty
------------	-----------------
