

HVLS Industrial Ceiling Fan

This high-volume, low-speed (HVLS) industrial ceiling fan is designed for large spaces. It provides efficient air circulation and temperature regulation.

ADDITIONAL IMAGES

Overview

High-Efficiency Industrial Ventilation

This large-scale industrial ceiling fan is designed to provide optimal air circulation in expansive facilities such as warehouses and factories. Engineered with high-quality components, it features a 7.3-meter diameter and advanced frequency control to minimize energy consumption while maintaining high performance. Its durable construction ensures safe and reliable operation in demanding industrial environments.

Technical Specifications

Standard Diameter	7.3 m
Motor Power	1.5 kW
Input Voltage	380V (Customizable)
Blade Material	Aluminum Magnesium Alloy

Performance Metrics

Performance Highlights

1000 sqm
Coverage Area

13000 m³/min
Airflow Volume

12 m
Ideal Installation Height

Installation & Design

Minimum Installation Space	1.1 m
Structural Materials	6063 Aluminum Profile, CNC Machined

Control Systems

Control System Details

- Frequency converter for energy saving
- Integrated motor for deceleration
- Customizable voltage options available
