

Hybrid Bicycle with Alloy Frame

This hybrid bicycle features a lightweight alloy frame designed for versatile riding on paved and unpaved surfaces. Equipped with a front suspension fork, it absorbs shocks for a smoother ride.

Product Overview

Versatile Hybrid Performance

This hybrid bicycle is engineered for versatility, seamlessly transitioning between paved roads and unpaved trails. Featuring a lightweight alloy frame and a shock-absorbing front suspension fork, it ensures a smooth and controlled ride across various terrains. Equipped with a reliable multi-gear drivetrain and responsive braking, this bike provides the efficiency and safety required for both commuting and recreational riding.

Key Features

Frame Material	Alloy
Suspension	Front Suspension Fork
Terrain Compatibility	Paved Roads, Unpaved Trails, Commuting, Recreational
