

Hydraulic Angle Cutting Machine

This angle cutter is designed as an advanced tool for cutting angles. It cuts off material quickly and cleanly, leaving a smooth section.

Product Overview

Precision Hydraulic Cutting

This hydraulic angle cutting machine is engineered for high-performance metal fabrication and industrial applications. It features a robust hydraulic cylinder for powerful cutting force, paired with adjustable blades that accommodate various angle sizes. Designed for stability and precision, this machine is an essential tool for construction and metalworking environments requiring accurate, repeatable cuts.

Technical Specifications

Key Features

- Robust hydraulic cylinder system
- Adjustable blade configuration for versatile angle sizes
- Heavy-duty base for operational stability
- High-precision cutting capability

Management Standards

Standard	System Type
GB/T19001-2008	Quality Management (ISO 9001)
GB/T28001-2011	Occupational Health & Safety (OHSAS 18001)
GB/T24001-2004	Environmental Management (ISO 14001)

Certifications

CE, GS, ISO 9001, ISO 14001, OHSAS 18001
