Product Overview

High-Performance Hydraulic Brake Cylinder

This hydraulic brake cylinder is engineered for reliable performance in automotive braking systems. Featuring a robust cast metal body and dual rubber dust boots, it provides excellent protection against contaminants to ensure long-term durability. The design includes a precision bleeder valve and secure threaded ports, facilitating easy installation and maintenance for various vehicle brake system applications.

Technical Specifications

Maintenance Features

- Bleeder valve for air bleeding
- Protective cap for bleeder valve
- Threaded ports for leak-proof connection

Construction Materials

Cast Metal Housing, Rubber Dust Boots

Part Identification

180118

Application

Industry Category

Auto Parts • Aftermarket Service • Automobile Key Parts • Brakes System
