

Hydraulic Brass Bender

This hydraulic brass bender is designed for precisely bending brass materials. Its robust hydraulic system allows for efficient and controlled bending, ensuring accurate angles and shapes.

Overview

Precision Hydraulic Bending

The CB-150D is a robust hydraulic brass bender designed for precision metal fabrication, particularly for auto-control distributor projects. Its specialized openable design allows for complex bending shapes like 'n' or '1' with ease. With built-in angle indicators and a portable form factor, it provides a reliable solution for consistent 90-degree and 45-degree bends without damaging the material.

Technical Specifications

Performance Metrics

16 ton

Output Force

150 mm

Max Bending Breadth

10 mm

Max Thickness

23 kg

Weight

Compatible Hydraulic Pumps

- CP-700
- CP-700-2A
- DYB-63A
- CTE-25AS

Features

Design Highlights

Portable • Openable Design • Precision Angle Indicators • Non-Damaging

Bending Capabilities

90 Degree Bending, 45 Degree Bending, N-Shape Bending, 1-Shape Bending
