

Hydraulic Brass Cutter

This hydraulic brass cutter is designed for efficient and precise cutting of brass materials. It features a robust construction and a hydraulic system for powerful cutting force.

Product Overview

Precision Hydraulic Brass Cutting

The CWC-200 is a specialized hydraulic brass cutter engineered for industrial applications, particularly within auto-control distributor projects. It offers a flat cutting mechanism that ensures precise 90-degree bends without damaging the brass material. Designed for portability and efficiency, this tool provides consistent, reliable performance for professional metalworking environments.

Performance Metrics

Output Force

20 ton

Output Force

Cutting Capacity

Parameter	Value
Max Breadth	200 mm
Max Thickness	12 mm

Technical Details

Physical Specifications

35 kg

Weight

Compatibility

Compatible Hydraulic Pumps

- CP-700
- CP-700-2A
- DYB-63A
- CTE-25AS

Key Features

Capabilities

90-degree cutting, 45-degree indication, Portable design, Non-damaging cutting
