

Hydraulic Cable Crimper

This hydraulic cable crimper is designed for crimping electrical cables and connectors. It utilizes a hydraulic system to apply high pressure, ensuring secure and reliable connections with interchangeable dies for various cable sizes.

Product Overview

Professional Hydraulic Cable Crimper

The hydraulic cable crimper is a specialized tool designed for efficient crimping of electrical cables and connectors. Utilizing a robust hydraulic system, it allows for the application of high pressure with minimal manual effort, ensuring secure and reliable connections every time. This tool is an essential asset for electrical contractors, technicians, and maintenance professionals seeking precision and durability in their field work.

Technical Features

Target Applications

- Electrical contracting
- Cable termination
- Maintenance and repair
- Connector crimping

Operation Mechanism

Hydraulic system for high-pressure application

Design Features

Ergonomic handles, High pressure output, Interchangeable dies
