

Hydraulic Clutch Master Cylinder

This hydraulic clutch master cylinder is used in automotive applications. It features a reservoir connection for supplying hydraulic fluid to actuate the clutch slave cylinder.

Product Overview

Hydraulic Clutch Master Cylinder

This hydraulic clutch master cylinder is designed for reliable performance in automotive clutch actuation systems. Constructed from durable cast metal, it features integrated mounting points for secure installation onto the vehicle's firewall or pedal assembly. The unit includes a dedicated reservoir connection to ensure consistent hydraulic fluid supply, facilitating smooth and responsive clutch operation.

Technical Specifications

Key Features

- Integrated reservoir connection
- Firewall mounting points
- Pedal assembly compatible

Material

Cast Metal

Application

Automotive, Hydraulic System
