

Hydraulic Drilling Rig

This automatic hydraulic drilling rig is used in the oil and gas industry for drilling operations. The hydraulic system provides the power and control necessary for efficient and precise drilling.

Overview

Advanced Hydraulic Drilling Rig

This automatic hydraulic drilling rig is a sophisticated piece of equipment engineered for high-performance drilling operations in the oil and gas industry. Featuring a robust derrick structure, it is designed for precise control during the raising and lowering of drill strings. With integrated power generators, control cabins, and advanced pipe handling modules, this rig ensures efficient, organized, and reliable performance in demanding field environments.

Key Features

Integrated Modules

- Automatic hydraulic control system
- Tall derrick structure
- Integrated power generation unit
- Advanced control cabin
- Automated pipe handling equipment

Industry Application

Oil & Gas • Well Services • Drilling Operations
