

Hydraulic Gear Pump for Industrial Applications

This high-pressure hydraulic gear pump is designed for demanding industrial applications. It features a robust construction with a cast iron housing and hardened steel gears for long-lasting performance and reliability.

Product Overview

High-Performance Hydraulic Gear Pump

This high-pressure hydraulic gear pump is engineered for demanding industrial applications requiring consistent performance. Constructed with a durable cast iron housing and hardened steel gears, it ensures long-lasting reliability in heavy-duty environments. The unit provides efficient fluid transfer and stable pressure output, making it an ideal choice for hydraulic power units, mobile machinery, and complex industrial systems.

Technical Specifications

Housing Material	Cast Iron
Gear Material	Hardened Steel

Key Features

Design Attributes	High-Pressure, Robust Construction, Hardened Steel Gears, Consistent Pressure Output
-------------------	--

Applications

Suitable Applications

- Hydraulic power units
- Mobile equipment
- Machinery systems
