

Hydraulic Impact Punch Down Tool

This hydraulic cutting tool is designed for efficiently and cleanly cutting various materials. It features a powerful hydraulic system that delivers consistent cutting force for precise and accurate cuts.

Product Overview

High-Performance Hydraulic Cutting

The CAC series hydraulic cutting tool is engineered specifically for precision cutting of angle iron. Designed for reliability in demanding environments like bridge construction and high-pressure iron tower maintenance, it delivers quick, clean cuts with smooth, burr-free surfaces. Its portable design ensures easy operation and transport for both on-site and workshop applications.

Technical Specifications

Output Force	35 Tons
Cutting Range	75x75x10 mm
Weight	36 kg
Dimensions	330x230x360 mm

Compatibility

Compatible Hydraulic Pumps	CP-700, CP-700-2A, CFP-800, DYB-63A
----------------------------	-------------------------------------

Applications

Ideal For

- Bridge construction
- High-pressure iron tower maintenance
- Outdoor field work
- Industrial metal fabrication

Key Features

Performance Benefits

Quick Cutting • No Scrap Iron • Smooth Surface • Portable • Simple Operation
