

Hydraulic Log Splitter

The hydraulic log splitter is a powerful machine designed for efficiently splitting logs. It features a robust hydraulic system capable of generating significant force to split logs of various sizes.

Product Overview

High-Efficiency Hydraulic Log Splitter

This hydraulic log splitter is engineered for efficient and reliable firewood processing, making it an essential tool for homeowners, farmers, and forestry professionals. Featuring a powerful 3000W motor and a robust 6-ton splitting force, it handles logs up to 520mm in length with ease. Designed with safety and durability in mind, this machine streamlines wood preparation tasks while ensuring consistent, high-performance results.

Technical Specifications

Splitting Force

6 ton

Splitting Force

Motor Power	3000 W
Voltage	230 V

Capacity & Dimensions

Max Log Length	520 mm
Max Log Diameter	300 mm

Features

Key Features

- Hardened steel splitting wedge
- Two-handed safety operation
- Integrated transport wheels
- Robust hydraulic system
