

Hydraulic Material Baling Press

This hydraulic pressure packing machine efficiently compresses materials for high-volume baling. Its robust hydraulic system applies consistent pressure, ensuring tightly packed bales of textiles, fibers, and recycled plastics.

Overview

High-Efficiency Hydraulic Baling Solution

This hydraulic material baling press is engineered for high-volume compression of various industrial materials, including textiles, fibers, and recycled plastics. Featuring a robust hydraulic system, it ensures consistent pressure for tightly packed, uniform bales. The integrated design includes an automated feeding mechanism, a reinforced compression chamber, and a reliable ejection system, making it an essential asset for industrial waste management and recycling operations.

Technical Specifications

Model Performance Data

Model	Power (KW)	Dimensions (mm)	Template Size (mm)	Weight (kg)
30T	7.5	1520x1140x3030	900x600x900	1650
50T	11	1520x1300x3200	900x650x1000	2250
80T	15	1600x1300x3100	1000x650x1000	2500
100T	18	1600x1400x3450	1000x700x1050	3500

Key Features

Safety & Operation

- Automated operation sequence
- Integrated safety protection systems
- Durable industrial-grade construction
- Seamless ejection mechanism

Suitable Materials

Textiles, Fibers, Recycled Plastics, Industrial Waste
