

Hydraulic Metal Bending Machine

This hydraulic bending machine is designed for precise metal forming. It features a robust hydraulic system for smooth and powerful bending operations.

Overview

Industrial Hydraulic Bending Solution

This hydraulic metal bending machine is designed for precise and powerful metal forming tasks, capable of handling plate thicknesses of 4 mm and greater. It features a robust hydraulic system with an adjustable tool distance, ensuring versatility for various bending requirements. The unit is equipped with a foot pedal switch for hands-free control, providing operators with precise command over the bending process.

Technical Specifications

Detailed Specifications

Parameter	Value
Model	HBV48
Item No.	373521
Stroke	150 mm
Back Gauge	105-550 mm
Bending Thickness	4 mm
Net/Gross Weight	520/620 kg

Features & Accessories

Key Features

- Hydraulic brakes for heavy-duty bending
- Adjustable distance for upper and lower tools
- Foot pedal switch for hands-free operation
- Simple setup process
- Bends can be closed and removed by unpinning the bar
- Hydraulically operated foot valve

Included Accessories

Foot pedal
