

Hydraulic Metal Cutting and Bending Machine

This hydraulic metal cutting and bending machine is designed for precision metal forming. It features a robust frame, hydraulic system, and a control panel for programming and operation.

Overview

Precision Hydraulic Metal Processing

This hydraulic metal cutting and bending machine is engineered for high-precision metal forming and fabrication tasks. Built with a robust, heavy-duty frame, it utilizes a powerful hydraulic system to ensure clean cuts and accurate bends across various metal thicknesses. The integrated control panel allows for efficient programming and operation, making it an essential tool for professional manufacturing environments.

Technical Specifications

Machine Type	Hydraulic Metal Cutting and Bending Machine
Primary Functions	Metal Cutting, Metal Bending, Metal Folding

Key Features

Operational Features

- Robust structural frame
- High-power hydraulic system
- Programmable control panel
- Precision forming capabilities
