

# Hydraulic Metalworking Ironworker

This hydraulic ironworker is designed for various metalworking tasks including punching, shearing, notching, and bending. It features a robust frame, hydraulic power unit, and multiple workstations for efficient metal fabrication.

## ADDITIONAL IMAGES

## Overview

### Versatile Hydraulic Ironworker

This hydraulic ironworker is a comprehensive metalworking solution designed for fabrication shops, manufacturing plants, and construction sites. It features a robust frame and a powerful hydraulic unit capable of performing multiple operations including punching, shearing, notching, and bending. Equipped with essential safety features like emergency stops and protective guards, it ensures reliable performance for diverse metal processing tasks.

## Capabilities

### Supported Operations

- Punching
- Shearing
- Notching
- Bending
- Angle Steel Shearing
- Flat Steel Shearing
- I-Beam Joint Creation
- C-Channel Joint Creation
- Civil Air Defense Lock Creation

### Available Model Series

Q35Y-16, Q35Y-20, Q35Y-25, Q35Y-30, Q35Y-40, Q35Y-50

## Safety & Design

### Safety Features

Emergency Stop Button • Protective Guards • Robust Frame Construction
