

Hydraulic Micro-Surfacing Slurry Seal Paver

This slurry seal paver is designed for micro-surfacing applications in road construction and maintenance. It utilizes a hydraulic system for efficient mixing and uniform application of slurry seal materials.

Product Overview

Hydraulic Micro-Surfacing Slurry Seal Paver

The HRF-100A is a professional-grade hydraulic slurry seal paver engineered for micro-surfacing applications in road maintenance and construction. Designed for efficiency, it features a robust hydraulic system that ensures precise mixing and uniform material distribution. This paver is ideal for applying thin layers of asphalt emulsion, aggregate, and additives to effectively extend pavement life and enhance surface quality.

Key Performance Metrics

Paving Capabilities

100 HRF-A

Model Series

Technical Specifications

System Features

- Hydraulic mixing and application system
- Large-capacity material hopper
- Precise material dispensing mechanism
- Adjustable paving width
- Variable speed control

Primary Applications

Road Construction, Road Maintenance, Micro-surfacing, Slurry Seal Application
