

Hydraulic Motor and Pump Unit

This unit combines a hydraulic motor and pump for efficient power transfer. The motor features cooling fins and connects directly to the hydraulic pump.

Product Overview

High-Performance Hydraulic Motor and Pump Unit

This integrated hydraulic motor and pump assembly is engineered for reliable power transmission in industrial machinery. It features a robust cylindrical motor body equipped with cooling fins for efficient thermal management during extended operation. The unit is securely mounted on a stable base, ensuring durability and ease of installation in various hydraulic systems.

Technical Specifications

Cooling

Air-cooled • Cooling fins

Key Design Features

- Integrated hydraulic unit
- External drive shaft
- Heat-dissipating fins

Construction

Coupled motor and hydraulic pump assembly

Mounting

Base-mounted

Finish

Light gray
