

Hydraulic Pipe Clamp with Vibration Dampening

This galvanized metal pipe clamp is designed for securely mounting hydraulic pipes and tubes. The clamp provides robust support and vibration dampening for hydraulic systems through its two-piece construction and bolted design, making installation and adjustments simple.

Product Overview

Hydraulic Pipe Clamp with Vibration Dampening

This galvanized metal pipe clamp is engineered for the secure mounting of hydraulic pipes and tubes in demanding industrial environments. Its two-piece construction allows for straightforward installation and precise adjustment, ensuring a reliable fit. Designed to provide robust support, the clamp also features built-in vibration dampening capabilities to maintain system integrity and reduce noise in hydraulic applications.

Technical Specifications

Primary Applications

- Hydraulic systems
- Industrial piping
- Tube mounting

Construction

Two-piece design

Finish

Galvanized metal

Key Features

Vibration Dampening, Adjustable, Easy Installation, Robust Support
