

Hydraulic Press Brake for Metal Forming

This hydraulic press brake is designed for precision bending of sheet metal. It features a long bending beam, side supports, and a control panel for adjustable parameters and robust construction.

Overview

Precision Metal Forming

This hydraulic press brake is engineered for high-precision bending of sheet metal in demanding industrial environments. Featuring a robust construction and a sophisticated control panel, it offers operators precise control over bending parameters for consistent, repeatable results. The machine is designed to handle various metal forming tasks with ease, making it a versatile addition to any fabrication workshop.

Key Features

Capabilities	Sheet Metal Bending, Adjustable Parameters, Precision Forming, Robust Construction
--------------	--

Technical Details

Support Features

- Long bending beam
- Side supports

Bending Mechanism	Hydraulic
Control Interface	Integrated Control Panel
