

Hydraulic Press Brake for Metal Forming

This hydraulic press brake is designed for precision metal forming. Its robust frame ensures stability and accuracy during bending operations.

Overview

Precision Hydraulic Forming

The WC67Y hydraulic press brake is engineered for high-precision metal forming applications. Built with a robust frame, it provides the stability required for consistent bending, punching, and forming operations. Integrated with an intuitive control panel and advanced safety features, this machine delivers repeatable quality while prioritizing operator protection.

Performance

Operational Functions

- Bending
- Forming
- Punching

Safety

Safety Equipment	Light curtains, Emergency stop buttons
------------------	--

Technical Details

System Performance	High-consistency hydraulic force system
User Interface	User-friendly programmable control panel
