

Hydraulic Press for Casting and Forging

Heavy-duty hydraulic press machine designed for casting and forging applications. This robust metal forming machine is engineered for high-force operations, featuring a rigid frame, precision control systems, and a large working area.

Overview

Heavy-Duty Hydraulic Press

This robust hydraulic press machine is specifically engineered for demanding casting and forging applications. Featuring a rigid frame and precision control systems, it is designed to handle high-force operations required for shaping metal components. Its large working area makes it an ideal solution for industrial manufacturing environments requiring reliability and power.

Model Identifier

MP-16000

Technical Specifications

Key Design Features

- Rigid frame construction
- Precision control systems
- Large working area

Primary Applications

Casting, Forging, Metal Forming
