

Hydraulic Press Machine for Metal Forming

This hydraulic press machine is designed for industrial applications involving metal forming. It features precision controls, a robust frame, and safety mechanisms suitable for punching, bending, and shaping metal parts.

Overview

Industrial Metal Forming Solution

This hydraulic press machine is engineered for high-performance industrial metal forming applications. Built with a robust frame and precision control systems, it is designed to handle demanding tasks such as punching, bending, and shaping metal components. The integrated pressure monitoring and intuitive control interface ensure consistent operation and safety in professional manufacturing environments.

Technical Specifications

Key Features

- Robust industrial frame construction
- Precision hydraulic control system
- Integrated pressure monitoring gauge
- Multi-function control panel
- Safety-focused design

Model Designation	J21-40
Suitable Applications	Punching, Bending, Metal Shaping
