

Hydraulic Pump Assembly for Kubota Tractors

This hydraulic pump assembly is designed for Kubota tractors. It provides hydraulic power for steering, lifting, and implement control.

Product Overview

High-Performance Hydraulic Pump Assembly

This hydraulic pump assembly is a critical component engineered to maintain the efficiency of tractor hydraulic systems. Designed for heavy-duty agricultural environments, it ensures reliable power for steering, lifting, and implement control functions. Precision-built to meet rigorous operational standards, this assembly offers durability and seamless compatibility with specific tractor models.

Technical Specifications

Engineering diagram of the hydraulic pump assembly.

Part Number	3c081-82200
Compatible Tractor Model	M954

Construction

Key Design Elements

- Splined drive shaft
- Dual inlet/outlet ports
- Integrated O-ring seals

Build Materials	Cast Iron Body, Aluminum End Caps
