

Hydraulic Punch and Shear Machine with Dual Workstations

This hydraulic cutter features two working positions for efficient operation. It is commonly used for cutting vacuum hot forming products, as well as packing and decorating materials.

Overview

Industrial Hydraulic Punch and Shear Machine

This heavy-duty hydraulic punch and shear machine is engineered for high-precision metalworking in industrial environments. Featuring a dual-workstation design and a robust, stable frame, it delivers consistent performance for punching and shearing steel plates, profiles, and bars. The integrated hydraulic system offers high power output, while the intuitive control panel allows for easy operation and monitoring, making it an essential asset for fabrication shops and manufacturing facilities.

Technical Specifications

Number of Workstations	2
Compatible Materials	Steel Plates, Profiles, Bars

Safety and Control

Safety Equipment

- Emergency stop buttons
- Protective guards

Control System	Intuitive manual control panel for operation and monitoring
