

Hydraulic Quick Release Coupling

This is a hydraulic quick release coupling designed for fluid power applications. It incorporates a locking mechanism and braided hose reinforcement for secure and reliable connections.

Overview

High-Performance Hydraulic Quick Release Coupling

This hydraulic quick release coupling is engineered for efficient and secure fluid transfer in demanding industrial systems. Designed with a robust locking mechanism, it ensures reliable connections and minimizes leakage risk during operation. The component features integrated reinforcement for enhanced durability, making it suitable for high-pressure hydraulic applications.

Technical Specifications

Component Type	Hydraulic Quick Release Coupling
Design Features	Locking Mechanism, Braided Hose Reinforcement, Internal Flow Design

Dimensions

Key Dimensions

0 mm L1 Length	0 mm L2 Length	0 mm Total Length (L)
