

# Hydraulic Reversible Plow

This hydraulic reversible plow features a compact structure suitable for various land types. The machine's design ensures a level land surface, well-crushed soil clods, and small furrows after cultivation.

## ADDITIONAL IMAGES

## Product Overview

### Hydraulic Reversible Plow

This hydraulic reversible plow is a robust agricultural implement engineered for efficient soil turning and seedbed preparation. Featuring a hydraulic system for smooth, precise reversing, it allows for continuous plowing in both directions, which significantly reduces turnaround time and optimizes field coverage. Its heavy-duty, high-strength steel construction ensures durability in demanding soil conditions, while adjustable settings provide versatility for various farming requirements.

## Key Features

### Performance Benefits

- Compact and suitable for various land types
- Effective soil clod crushing and turning
- Leaves land surface leveled after cultivation
- Minimized furrow size
- Improved soil aeration and weed control

## Technical Capabilities

### Operational Metrics

**2 reversible**

Plowing Directions

**1 integrated**

Hydraulic Actuation

### Construction

High-strength steel, Heavy-duty frame, Hydraulic system

## Compatibility

### Usage Suitability

Tractor-mounted • Medium-scale farming • Large-scale farming
