

Hydraulic Rock Drill

This hydraulic rock drill is designed for robust and efficient rock drilling operations. It features a durable construction with multiple hydraulic ports and connections for optimal performance, suitable for various drilling applications in mining, construction, and geological exploration.

Product Overview

About the Hydraulic Rock Drill

The YYG300B is a high-performance hydraulic rock drill engineered for demanding drilling applications. Designed with a focus on simplicity and ease of maintenance, this unit offers high operational efficiency and low energy consumption. It is recognized as a high-tech equipment solution, specifically designed to operate reliably in full hydraulic drilling taphole systems.

Performance Metrics

Performance Highlights

300 J

Attack Force

25 kW

Energy Consumption

Technical Features

Key Features

- Simple structure for easy maintenance
- High attack force (250-300J)
- Low energy consumption (d25KW)
- Long life cycle components
- Steady operation with low noise levels
