

Hydraulic Roll Groover for Pipe

This roll groover utilizes a hydraulic pump system to create precise grooves in pipes. It is suitable for a variety of pipe sizes and materials, ensuring reliable performance in plumbing, HVAC, and industrial applications.

Product Overview

Precision Pipe Preparation

The G12C Roll Groover is a robust and versatile tool engineered for creating accurate and consistent grooves in a variety of pipes. Equipped with an integrated hydraulic pump system, it ensures smooth and controlled operation for demanding plumbing, HVAC, and industrial environments. Its durable design includes a sturdy stand for enhanced stability and safety during heavy-duty pipe preparation tasks.

Key Features

Operation Type

Hydraulic Assisted • Stable Stand-Mounted

Suitable Applications

Plumbing, HVAC, Industrial Piping

Design and Utility

Control Features

- Hydraulic pump system for controlled pressure
- Integrated power switch for user convenience
- High-stability floor stand
