

Hydraulic Rubber Molding Machine

This hydraulic rubber molding machine is designed for precision manufacturing. It features a robust frame, hydraulic cylinder, integrated control panel, and cooling system for reliable performance.

Overview

Precision Hydraulic Molding

This hydraulic rubber molding machine is engineered for high-precision manufacturing of diverse rubber components. It features a robust multi-column frame structure ensuring operational stability and consistency. Equipped with an integrated digital control system, it provides operators with precise control over the molding process for reliable industrial performance.

Technical Specifications

Key Performance Indicators

1 count

Central Hydraulic Cylinder

Frame Construction

Multi-column support, Robust frame, Industrial grade

Control & Safety

Safety Systems

- Safety light tower
- Integrated cooling system

Interface Type

Digital display with push-button controls
